Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Applicant's election of claims 1 and 3 in Paper No. 0803 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Specification

2. The abstract of the disclosure is objected to because it exceeds 150 words and contains multiple paragraphs. Correction is required. See MPEP § 608.01(b).
3. The disclosure is objected to because of the following informalities: it lacks section headings, such as "Background of the Invention" and "Summary of the Invention".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1761

6. Claim 3 recites "during the usual conditions". It is not clear what the "usual conditions" would be.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Brauner et al [Pat. No. 5,171,950].

Brauner et al teach a rectangular bag comprising surface sides of plastic film (Figure 5; column 4, line 43), heat seals (Figure 5, #32a, 34a, 36a), and a vapor communication joining section which runs parallel to the longitudinal edge on the upper surface (Figure 5, #32a; column 9, lines 46-68).

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brauner et al as applied above, in view of Toshima et al [Pat. No. 5,928,553].

Art Unit: 1761

Brauner et al teach the above mentioned components. Brauner et al do not teach a normal peeling force of at least 3 kg/15 mm and 0-1200 g/15 mm at 90°C. Toshima et al teach a bag comprising a vent with a peel force of 100-1500 g/15mm (Figure 2a, #3; column 2, line 3). It would have been obvious to one of ordinary skill in the art to use a normal peeling force of at least 3 kg/15 mm and 0-1200 g/15 mm at 90°C in the invention of Brauner et al, in view of Toshima et al, since both are directed to bags with vents, since Brauner et al already taught using different types of adhesives in order to provide the desired performance (column 8, lines 31-44), and since adhesives with these properties were commonly used in vent bags as shown by Toshima et al (column 2, line 3).

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stevenson [Pat. No. 4,358,466], Tang [Pat. No. 6,582,123], and Hagino [Pat. No. 5,655,842] teach bags with vents.
